Quality and manufacturing cost is measured by the Carbon content and SkyVac Poles have the Maximum. Other systems will be using a composite mix containing more fibre glass that are 25% heavier than the SkyVac poles. This gives us three major advantages strength, rigidity and lightness. Each 1.5 metre (5ft) pole only weighs 305 grams. Important factors, especially when cleaning at height over long periods.

- Why our Camera System**
- Our System has been specifically designed to work Outdoors in harsh environments
- Robust Construction
 - Water Proof Monitor and Camera
 - Rubberized Drop Proof Protective Jacket
 - Unique Zoom Facility + night vision
 - On-Board Recording
 - New Charging Facility Allows You to Charge Both Monitor and Camera Simultaneously
 - Easy User Large Operational Buttons

FREE marketing disc with every system Containing 50 professional images and promotional video of SkyVac in action for your website

skyVac Telescopic Inspection Poles

Our lightweight telescopic poles can elevate our **cordless recordable camera** up to 14 Metres (46ft) Our carbon fibre poles are one of lightest poles on the market, but are precision engineered to be tough and rigid.

Typical Usage

- High Level Building Maintenance indoors and outdoors
- Gutter and Roof Inspection
- Security and Surveillance

IDEAL FOR GUTTER INSPECTIONS
